Substance use may occur among hospitalized patients and is often a response to untreated substance use disorders or psychiatric conditions, withdrawal, pain, stress, or stigma. As a result, the following guidance for Penn Medicine hospital care teams was prepared by a group of institutional experts in addiction, hospital, emergency, and family medicine, social work, and nursing, with input from key stakeholders in security, legal, and administration.

Penn Medicine has an ethical and legal duty to provide care to all patients and to ensure the safety of patients, families, visitors, staff, and volunteers. All Penn Medicine hospitals are substance-free zones consistent with the Code of Conduct (See [Code of Conduct | Penn Medicine](#)).

Purpose

The purpose of this document is to guide healthcare team members around their roles and responsibilities when caring for patients with substance use disorders (SUDs) who use or are at risk for using substances during their admission. The goals are to:

- Ensure a safe environment for staff, patients, and families.
- Promote respect for all patients through a non-judgmental approach.
- Standardize care to promote equity
- Prevent the harms associated with in-hospital substance use

Implementation

These guidelines are for staff that work at Penn Presbyterian Medical Center when managing patients with substance use disorders. The guidelines may be modified based on clinical indication, if appropriate and documented, or in emergency or unusual circumstances.

Penn Presbyterian Medical Center (PPMC) Clinical Practices of the University of Pennsylvania Guideline	Number 11.118 Page 2 of 10
SUBJECT: Addressing In-Hospital/Healthcare Substance Use in Patients with Substance Use Disorders: Clinical Practice Guidelines	Effective 2.7.24

Scope Statement

These guidelines apply to Penn Presbyterian Medical Center (PPMC) and those parts of the Clinical Practices of the University of Pennsylvania (CPUP), which practice at or in conjunction with PPMC operating under the PPMC license. This policy also applies to the following: (i) those practices and sites that are on or off campus facilities or departments of PPMC and operating under its license; (ii) those ambulatory surgical facilities operating under PPMC's governing body when indicated, including the Surgery Center at Penn Medicine University City (Surgery Center) and Penn Digestive and Liver Health Center University City (PDLH); (iii) Presbyterian Center for Continuing Care (PCCC); (iv) all ambulatory care facilities (ACF) that are off campus departments of PPMC operating in New Jersey including the Penn Presbyterian Infusion Services (PPIS); (v) private practices or entities that lease space in property owned or leased by PPMC only if and to the extent that they provide contracted clinical services to PPMC; and (vi) personnel that provide contracted clinical services to PPMC patients.

Best Practice Guidelines for clinicians treating patients with concern for substance use.

Practice Guidelines	Recommendations with examples
1. <i>Assess patients on admission/intake for evidence of substance use disorder and educate the patient/family regarding the hospital policy which prohibits the use of illicit substances in the healthcare setting. Reinforce expected behaviors as outlined in Penn Medicine's Patient Responsibilities and Code of Conduct.</i>	<p>Assess the patient's knowledge about the risks of substance use, their stage of behavior change, and their specific goals related to substance use. Assessment should also include a frank discussion about the risks and consequences of in-hospital/ healthcare settings. Patients should be informed of hospital policy and the possibility of a search.</p> <p>For example, "<i>We understand that you may have cravings or feel the need to use in the hospital/healthcare setting while receiving medical care. We care about your safety and comfort and want to work with you to prevent in-hospital/healthcare substance use. If you start feeling the urge to use, will you let us know so that we can better understand your symptoms and address your needs? We do not permit substance use in the healthcare setting.</i>"</p>
